WARRANTY INFORMATION BULLETIN

WIB 2012-13 9/10/2012

This Bulletin forms part of the Warranty Procedure Manual.

ATT: SERVICE MANAGER/WARRANTY ADMINISTRATORS

September WIS Disk

The September WIS disk was recently distributed to the dealer network and this version of the disk has had some changes made to it.

The following changes were made to the September WIS disk:

1. Part pricing validation
2. Handling Allowance button
3. CPS position code format
4. CPS Load button

Part pricing validation – The September version of WIS will automatically populate the price of a part when the part number is entered on the claim form (when the part number has been entered, tab across the line and the part name and part price will be populated). The Quantity field will be blank and the number of units will need to be entered. If the number of units is greater than 1, the part price in the Value field will remain as the part price for 1 unit. WIS will calculate the unit price by the number of units in the Quantity field. This calculation will be done in the background and will not be reflected on the claim form. For example, if the warranty part price is $10.00 and the number of units is 5, the part price on the claim form will show as $10.00 but WIS will calculate the total price as $50.00.

The part price that is populated on the claim form is the current warranty part price. The previous August dated WIS disk had the same functionality but the part price loaded was the warranty part price less the dealer handling percentage. This has now been corrected and Dealers should be able to submit claims with the correct part pricing without having to manually calculate the warranty part price.

If Dealers need to submit older claims and the part pricing in WIS is different to what the part pricing was at the time of repair, Dealers can now put in the part price at the time of repair without WIS reverting to the current part price. A warning box will appear when the claim is saved, but Dealers can override the price and continue to submit the claim.

This functionality should resolve the issue where Dealers had to submit claims with parts missing from their claims or use REFLASH and then add the part or parts once the claim was saved in SAP.

PO Box 8 Melrose Park SA 5039

Handling allowance button (Add HA) – The 'Add HA' button has been changed so that when it is selected it now populates the 'Hours' field with 0.1 and the 'QTY' field is left blank. Dealers will need to enter the number of units in the 'QTY' field applicable to the time taken.
e.g., if it took 18 minutes, enter 3 in the 'QTY' field for a time of 0.3 hours. i.e. 0.1 x 3 = 0.3. This functionality was available in the August dated WIS and continues in the September dated WIS.

CPS position code format – Dealers can again submit CPS claims through the import and validate functionality from their DMS. When Dealers import CPS claims from their DMS, the position code will now populate as 0500xx. Previously this functionality populated the position code as 0599xx which caused an error with the claim submission. This functionality was available in the August dated WIS and continues in the September dated WIS.

CPS Load button – When Dealers click on the 'Diamond Advantage' button 

for a CPS claim, the Capped Price Servicing intervals are displayed in a pop up box. The next available service is displayed with a due date and odometer reading. If that interval is required for selection, click on that line and the 'Load' button at the bottom of the pop up box will highlight. Click on the 'Load' button to populate the service interval on the claim. If the next available service is not the service interval that is required, double click on the service interval that is required and the claim form will be populated. In this instance, the 'Load' button will not be highlighted but double clicking the interval will have the same result. This functionality was available in the August dated WIS and continues in the September dated WIS.
