Subject: Closure of Repair Orders

Dear Valued Business Partners,

You are requested to review Warranty Procedure Manual sections 4.1 and 4.2, which stipulates that each time a Customer brings a vehicle into the Dealership for service or repair, a new Repair Order (RO) must be initiated.

Where work noted on the RO is unable to be completed during one visit and the vehicle is returned to the customer, the RO must be closed off and any recall, warranty or CPS claimed. The RO must not be held open for outstanding repairs.

If the vehicle is required to re-present later to complete outstanding repairs, a new RO must be created for this presentation.

Holding the RO open results in delayed claim submission, affects claim processing and/or acceptance and can adversely affect customer experience.

All claims raised from the same RO must have the same date and odometer reading (last tech clocking and odometer reading recorded) and must be submitted within MMAL's specified submission times.

Closing the RO and claiming completed repairs promptly assists with dealer claim processing, supports dealer cash flow and reduces open RO reports.

Where submission of CPS claims is delayed this has specific customer impacts:

- delays renewal of Roadside Assistance,
- affects determination of future CPS "next service due" parameters and
- may invalidate 10/10 Diamond Advantage warranty.

This can have negative customer impacts, leaving the customer without support when they most expect it, through no fault of the customer.

Delayed claim submission impacts both the dealer and their customer.

Please ensure ALL RO's are closed when a vehicle is returned to the customer and any claims are submitted promptly.
