Subject: Capped Price Service "Next Service Calculator"

Dear Valued Business Partners,

To assist dealers in providing accurate information to customers to ensure vehicles are serviced in line with the Capped Price Service schedule, a "Next Service Calculator" has been added to the Warranty Portal.

Based on the VIN, date and mileage entered, the Next Service Calculator will determine

- the next service available to be performed (Todays Service),
- calculate the values to be recorded on the Next Service Due reminder sticker and the Onboard Service Reminder,
- display Diamond Advantage Eligibility
- display Diamond Advantage Extended Warranty status as Active/Inactive.

The Next Service Calculator considers the upper and lower time and distance limits and calculates the current available Capped Price Service and Next Service Due values using the information entered.

The calculator may also be useful in planning service bookings.
By entering different dates and mileage combinations you will be able to see CPS availability and how the service schedule is impacted. This may be particularly useful where a vehicle is presented near the upper limits of a CPS and a delay may result in that CPS lapsing and the DA Extended Warranty becoming inactive.
This will allow you to advise the customer and schedule the service appropriately.

Where the values entered do not align with an available CPS (e.g.early/interim servicing), a vehicle is not eligible for CPS or the available CPS have been exhausted, an error message will be displayed.
Please refer to the Service and Warranty booklet for service schedule requirements and manually calculate the service required and the Next Service Due interval.

Note 1: Where interim servicing is undertaken, and CPS is still active the Next Service Due values recorded MUST reflect when the Next CPS is to be undertaken based on the CPS schedule.

Note 2: 1,500km complimentary services DO NOT form part of the service schedule and are not included in the calculations.

Please refer to My Learning Hub and review the “Diamond Advantage: Service Training” for more information on the requirements and operation of CPS and Diamond Advantage

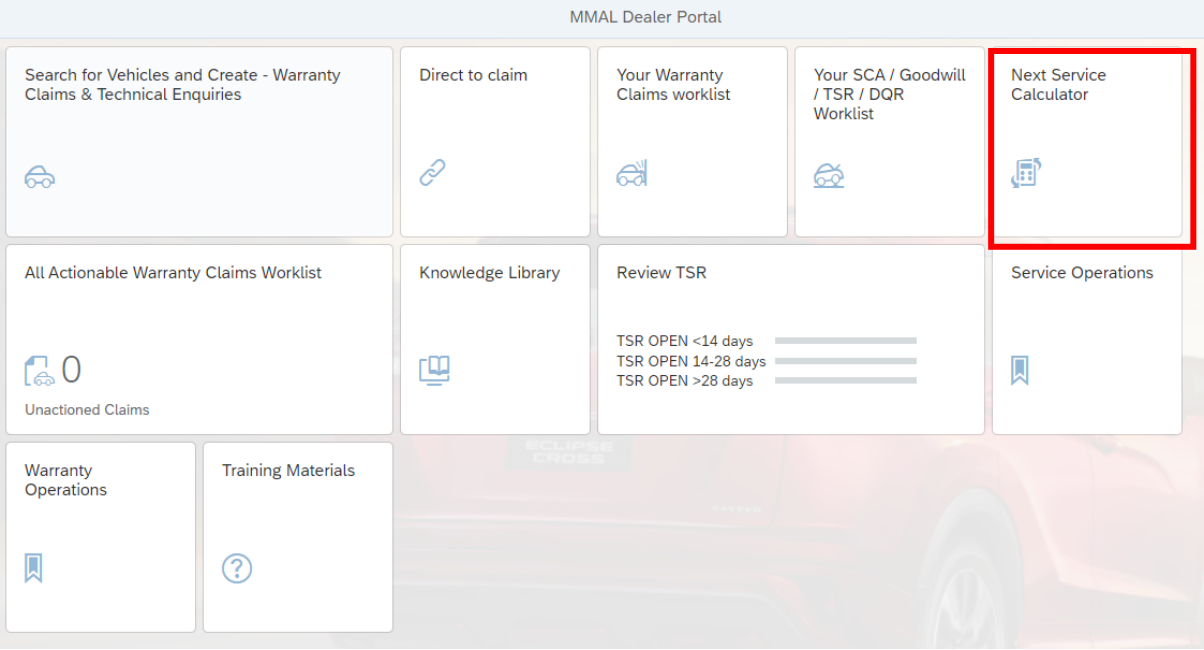

Yours sincerely,

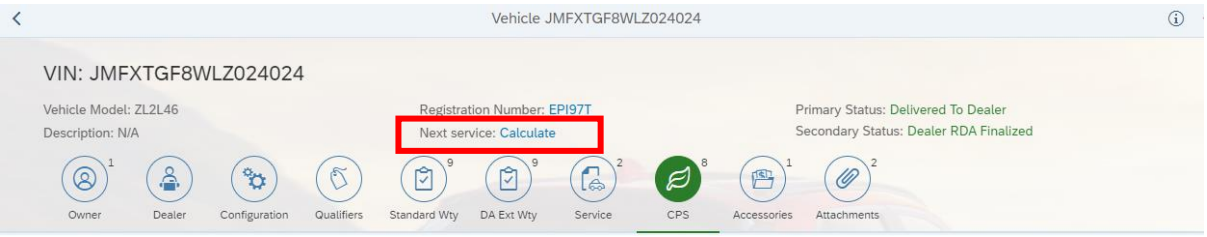

Fiona Lamond
Warranty Administration Manager

Please note:
1: The information contained in this document is CONFIDENTIAL and intended for Mitsubishi Dealer use only. It must not be provided to third parties.

The Next Service Calculator can be accessed by selecting the specific tile or by clinking on the “Calculate” link inside the vehicle search.

Enter the VIN, Date Service (is being or will be) Performed and the Service Mileage. Where the screen is accessed via the “Calculate” link, the VIN will prepopulate.

Please note:
1: The information contained in this document is CONFIDENTIAL and intended for Mitsubishi Dealer use only. It must not be provided to third parties.

To see how the Next Service Calculator operates we will consider the scenarios below.

The CPS table shows the 45,000km CPS is due on 12.08.2024 at 40,137km.
For this CPS to be available and for the vehicle to retain DA Extended Warranty eligibility the 45,000km CPS must be performed between 32,637km and 47,637km.

To simplify this example, we will concentrate only on the Service Mileage impact, however the Next Service Calculator considers both the Service Date and Service Mileage together when determining the results.

The Service Date used in the examples is within (early) the 45,000km CPS parameters and is the same for each example.

Scenario 1

The vehicle presents at 37,212km (considered early as it is before the 45,000km Next Service mileage of 40,137km).

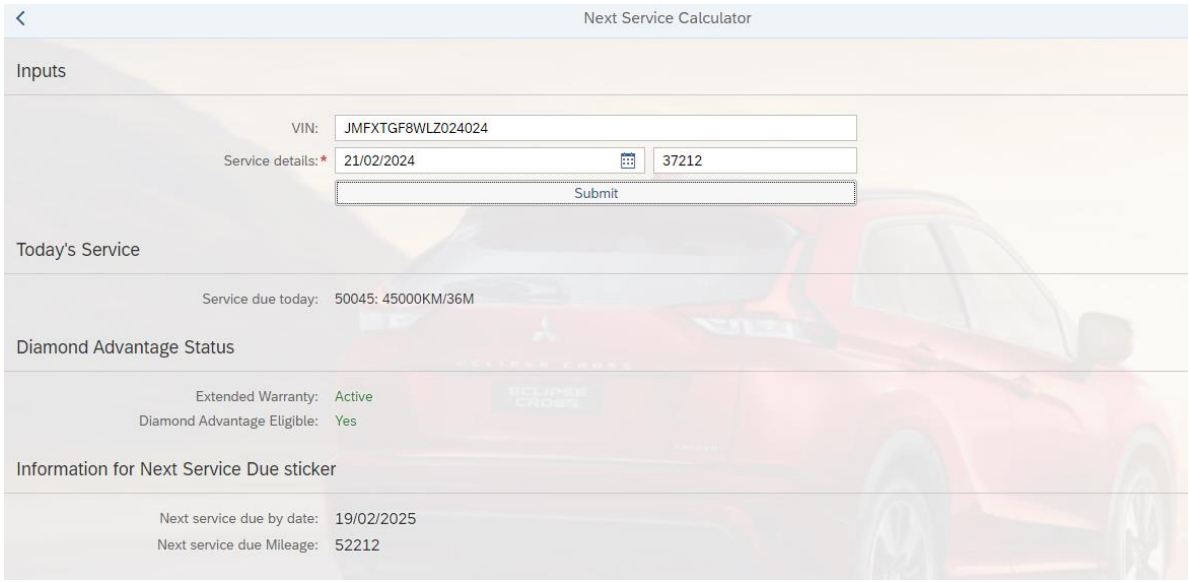

Based on the information entered the 45,000km is the next available service and is shown by the Next Service Calculator as "Today's Service".

As both previous CPS and this service (based on the information entered) will have been completed as required, Extended Warranty is shown as "Active", and the vehicle is Diamond Advantage Eligible.

The information for the "Next Service Due" sticker is calculated and displayed. Record the values on both the Next Service Due sticker and the vehicles Onboard Service Reminder.

Please note:
1: The information contained in this document is CONFIDENTIAL and intended for Mitsubishi Dealer use only. It must not be provided to third parties.

Note: As the 45,000km was performed early the Next Service Due intervals (i.e. for the 60,000km CPS) are brought in.

Scenario 2

The vehicle presents at 41,202km (considered late as it is after the 45,000km Next Service mileage of 40,137km).

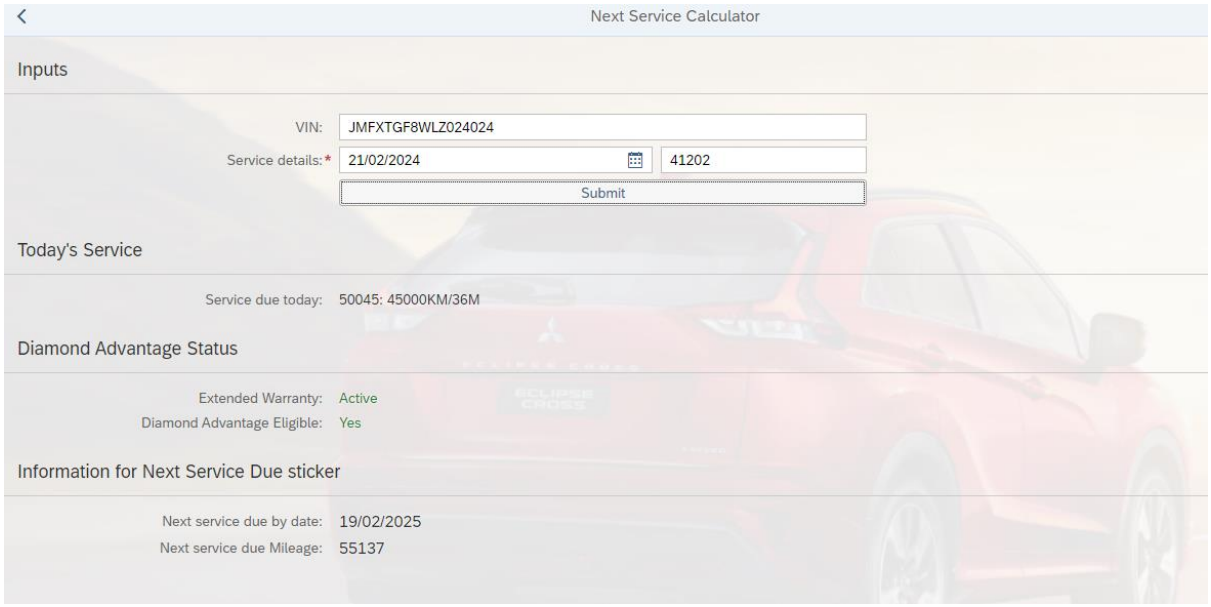

Based on the information entered the 45,000km is the next available service and is shown by the Next Service Calculator as "Today's Service".

As both previous services and this service (based on the information entered) will have been completed as required, Extended Warranty is shown as "Active", and the vehicle is Diamond Advantage Eligible.

The information for the "Next Service Due" Sticker is calculated and displayed. Record the values on both the Next Service Due sticker and the vehicles Onboard Service Reminder.

Note: As the 45,000km was performed late on mileage the Next Service Due mileage interval is not adjusted (however the Next Service date is brought in).

Please note:
1: The information contained in this document is CONFIDENTIAL and intended for Mitsubishi Dealer use only. It must not be provided to third parties.
2: This WIB forms part of the Warranty Procedure Manual

Scenario 3

The vehicle presents at 48,202km.

Based on the information entered the Service Mileage EXCEEDS the 45,000km CPS "To" Distance (KM) limit of 47,637km, therefore the 45,000km CPS is NOT AVAILABLE.

The next available CPS becomes the 60,000km CPS which is shown by the Next Service Calculator as "Today's Service".

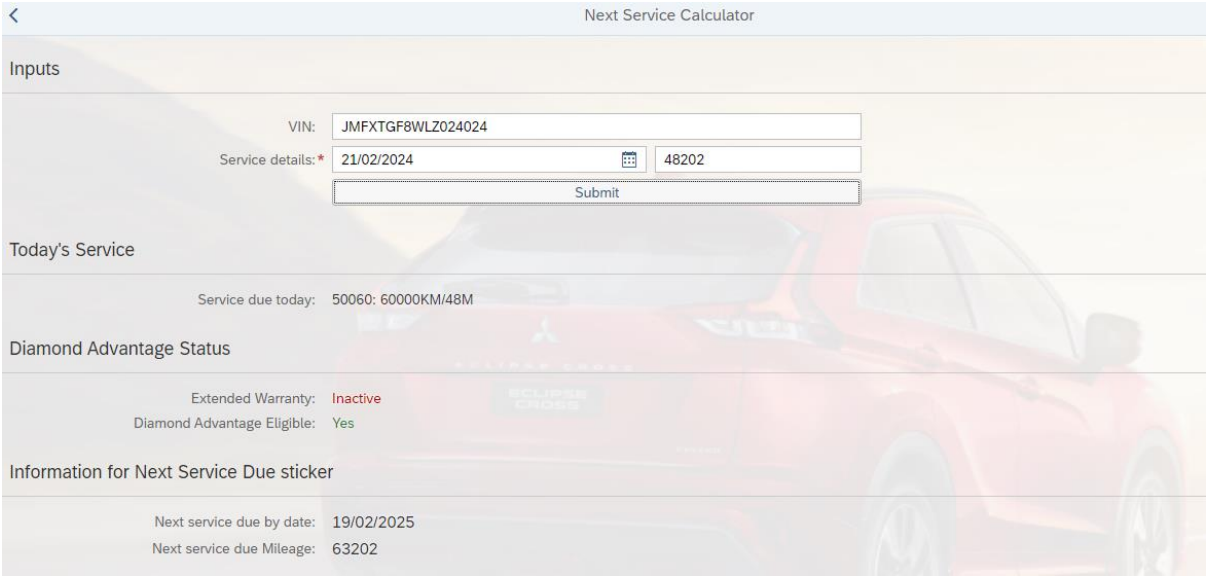

As, based on the information entered, the vehicle has exceeded the service interval of the 45,000km CPS, and is not eligible to claim the service, it is deemed as LAPSED.

Once the CPS is recorded as LAPSED the Diamond Advantage Extended Warranty will become "Inactive" and Warranty cover reverts to Standard 5yrs/100,000km.
The vehicle remains Diamond Advantage Eligible and all remaining CPS are still available.

The information for the "Next Service Due" Sticker is calculated and displayed. Record the values on both the Next Service Due sticker and the vehicles Onboard Service Reminder.

Note: As the 60,000km will now be performed early the next service intervals (for the 75,000km CPS) are brought in.

Please note:
1: The information contained in this document is CONFIDENTIAL and intended for Mitsubishi Dealer use only. It must not be provided to third parties.
2: This WIB forms part of the Warranty Procedure Manual

Important: Where a service has lapsed, it is the responsibility of the service department to ensure that any items missed because of the lapsed service, e.g. valve clearances/fluid replacements, etc, are completed as part of the current service and the owner is advised these items are required and will be at additional owner expense.

Scenario 4

In the case where a customer requests a service outside the CPS schedule e.g. an interim service that is earlier than the next scheduled CPS, the Calculator will not provide service information and an error message will be displayed.

Please refer to the Service and Warranty booklet for service schedule requirements.

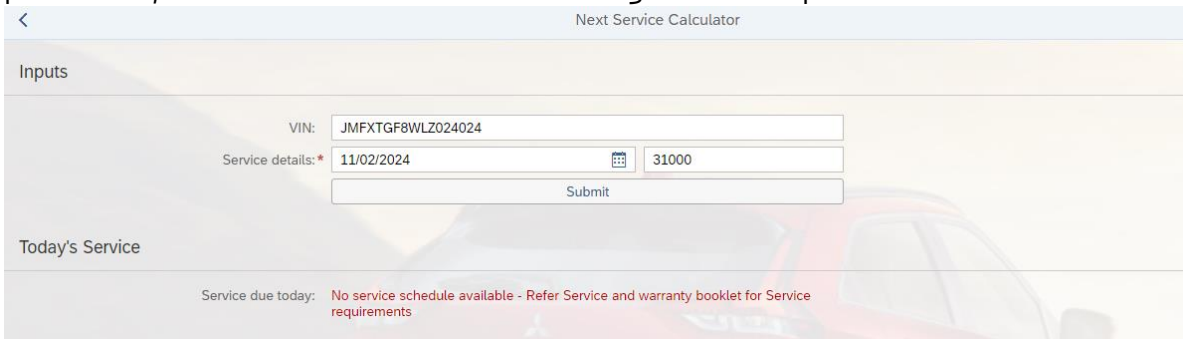

Manually calculate the service to be undertaken and Next Service requirements, as any values displayed may not be accurate.

If an interim service is performed, ensure that the Next Service Due sticker and vehicle Onboard Service Reminder correctly reflect when the next CPS is due to ensure the customer remains compliant with the CPS schedule.

Error examples

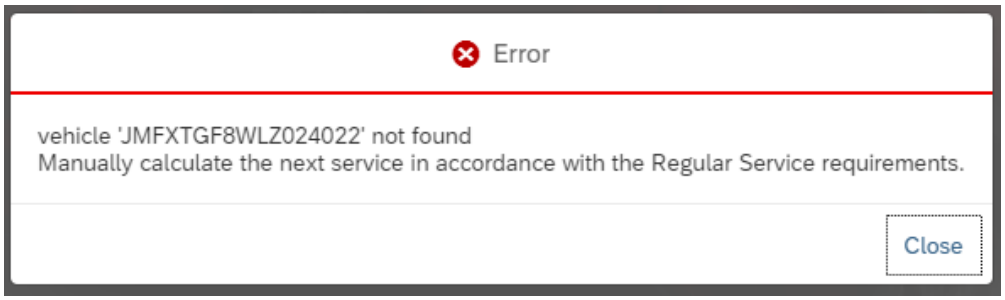

Service values entered outside available CPS schedule. If an interim service is performed, ensure customer is advised of Regular CPS requirements.

VIN is not eligible for CPS or CPS schedule is expired. Manually calculate next Regular Service.

Invalid Vin – check VIN and recalculate.
